

Aethera Sync Systems - Global Returns, Logistics & Support Matrix

2.1 Financial Refund Window

Standard retail customer returns qualify for direct-to-source financial refunds up to 30 days post-transaction delivery verification. Beyond 30 days, items revert exclusively to store credit mechanisms valid for exactly 12 fiscal months from issuance.

To process a return ledger successfully, items must reside in factory-sealed, un-opened boxes with unaltered original SKU barcodes. Warehouse intake nodes will reject any return packages showing signs of physical alteration, damage, or open-box status.

Return shipping fees are fully covered by Aethera Sync Systems only if the initiation request falls within 14 days of receipt. Beyond this window, a standard restocking and transit fee of \$14.50 is deducted from the final refund calculation.

2.2 Final Sale Exclusions & Special Orders

Clearance inventories, custom product runs, software provisioning keys, hardware components purchased during specialized promotional markdown assets, and limited-edition product drops are permanently labeled final sale and explicitly barred from refund protocols.

Enterprise volume orders exceeding 50 individual physical units fall under negotiated B2B service-level agreements and are bound by localized contract terminology, entirely superseding standard retail storefront return rules.

2.3 Shipping Discrepancies & Courier Resolution Paths

In instances where shipping tracking numbers confirm delivery but the physical asset is missing, or if an item arrives physically structurally broken, the end customer must raise a high-priority claim ticket within 48 hours of recorded delivery.

Failure to flag tracking errors within the 48-hour operational window shifts investigative burden to the customer's personal property insurance channels, absolving Aethera Sync Systems of direct logistical replacement liabilities.
